How to change Internet Explorer SSL Protocol Settings in Windows 7 for secure access.

Step 1: Open the Internet Properties Dialog box.

Click the start button and in the “search program and files” box, and type “Internet Options”.

Select “Internet Options” from the results. It will be under The Control Panel section. This will bring up the Internet Properties dialog box.

Step 2: Click on the “Advanced” tab and scroll all the way down to the bottom of the settings section.

Optionally, you may uncheck “Use TLS 1.0” setting. This will make your browser more secure and better protect you from compromised websites. However, you may lose access to web sites that have not transitioned to the new SSL Protocols.

**Step 4:** Click on Apply and OK buttons at the bottom of the Internet Properties Dialog Box.
